

Javier Olivieri

AGENTIC AI ARCHITECT · BUILDING AI-NATIVE SYSTEMS FOR FOUNDERS

Rosario, Argentina

+54 9 341 377 7677

javi10823@gmail.com

linkedin.com/in/javierolivieri

I design and build **agentic AI systems and automation architectures** — from autonomous multi-agent pipelines and RAG systems to voice AI products and full-stack AI-native applications that ship to production.

With **17+ years in full-stack development** and **3+ years specifically in production AI systems**, I specialize in mapping business processes end-to-end, identifying where AI creates real leverage, and executing — from technical blueprint to deployed system. I currently run multiple production AI products serving real clients daily. You get a partner who thinks in outcomes, not tickets.

WHAT I DO

Agentic AI Systems

Production multi-agent workflows using Claude API, CrewAI, MCP and LangGraph. Tool use, RAG pipelines, vision agents, human-in-the-loop. Already running in production, not PoCs.

Voice AI & Conversational

End-to-end voice agents with Retell AI, n8n middleware, GHIL integration. Built and deployed a full dialer PoC for US healthcare in weeks, not quarters.

Process Design & Automation

End-to-end workflow audits: map ops, identify bottlenecks, design scalable automated systems — n8n, Make, APIs, LLMs, document parsing, SaaS integrations.

AI-Native Product Architecture

Full-stack AI products from scratch — Next.js + FastAPI + Claude API + Postgres + vector DBs. Technical blueprint, architecture, and execution in one engagement.

US clients

Hiring pipelines

“We have worked with DevLabs for over a year and a half, and we created a great product for fertility treatments — serving thousands of patients across the US. I truly recommend DevLabs for your projects. They have an amazing team!

Joshua Sams

CTO · Sama Fertility — San Francisco, CA

“As our React & React Native Tech Lead, Javi demonstrated exceptional technical expertise and leadership. Their enthusiasm for AI technologies consistently pushed our team to innovate. Javi would be a valuable asset to any forward-thinking tech organization.

Fabian Firpo

Product Augmented Designer · Securitize

“Javi is an expert at his craft. He's an incredible developer that also has great knowledge of design and overall product development. I am extremely thankful to have worked with him — and even more important, to call him a friend and advisor.

Jul 2026 – Present

Agentic AI Engineer

FULL-TIME · HYBRID

Design and build agentic AI workflows for HR analytics and workforce intelligence products.

- Design and ship production AI features using multi-agent orchestration, structured outputs, tool use, and retrieval-based approaches.
- Contribute to evaluation infrastructure for agentic pipelines — reliability, calibration, and safety.
- Work across the full AI-engineering stack: prompt design, agent architecture, backend integration, and production monitoring.

Founder & Independent AI Engineer

STARDEVS LLC · DEVLABS.DEV · INDEPENDENT · SOLO OPERATOR

I operate as an independent AI engineer through DevLabs (STARDEVS LLC, Delaware). End-to-end ownership: discovery, architecture, code, deploy, and direct client support. No middle layer, no handoffs.

- Built Valentina, a vision-based AI quoting agent (Claude API) for a marble & stone company: reads architectural floor plans, applies 30+ business rules, auto-generates PDF + Excel quotes — cutting quote time from 3 hours to under 5 minutes. Live in production with full observability stack (audit events, debug mode, PII sanitizer at 5.84ms p95).
- Built HealthHue, an AI voice dialer PoC for a US healthcare client: Retell AI conversational agent + n8n orchestration + GHL CRM integration + React setter panel for live operator handoff. Full voice-first product end-to-end in weeks.
- Architected a 20-module government platform modernization (NestJS + Next.js + PostgreSQL + MinIO) replacing a legacy Java/IE11 system serving Argentina's national popular library network (CONABIP, ~5,000 libraries).
- Delivered AI-native full-stack products for US clients across healthtech, fintech, and Web3 — from blueprint to deployed production system.

Sama Fertility

SAN FRANCISCO, CA

Dec 2022 - Present

Full-Stack Tech Lead

INDEPENDENT CONTRACTOR

Leading architecture and product development for a US fertility care platform connecting 10k+ patients with remote clinical care across US clinics.

- Designed full system architecture from scratch — web + mobile — defining technical specs directly with CTO across a 3+ year engagement.
- Introduced AI-assisted tooling and automated dev workflows, increasing team throughput by ~35% without adding headcount.
- Shipped CI/CD pipelines that cut deployment cycle time from days to under 2 hours.
- Led distributed 4-person frontend team across US/LATAM time zones — sprint planning, code reviews, delivery ownership.
- Currently leading multi-tenancy migration and international phone number support rollout (Twilio geo-permissions, Canada launch).

SAN FRANCISCO, CA

Apr 2022 - Nov 2022

React / React Native Sr. Full-Stack

INDEPENDENT CONTRACTOR

Built and maintained web and mobile features for a digital securities platform tokenizing traditional financial instruments.

- Developed new features across marketing site, web app, and mobile.
- Integrated Framer CMS with React for marketing pages.
- Released iOS and Android apps to stores and coordinated with US/Spain stakeholders.

React Native React.js MERN Framer CMS CI/CD

Nifty Gateway

SAN FRANCISCO, CA

Nov 2020 - Jun 2021

React Native Sr. Full-Stack

INDEPENDENT CONTRACTOR

Developed cross-platform features for a leading NFT marketplace — Web, TV, and Mobile — within a fast-moving crypto/Web3 product team.

- Built UI across web, TV, and mobile using React Native and ReNative.
- Led code refactoring of React Native core and native modules.
- Designed and shipped CI/CD pipelines for multi-platform releases.

Feb 2017 - Oct 2020

React Native Tech Lead

INDEPENDENT CONTRACTOR

5+ years leading React Native development and mobile architecture across multiple US clients — from digital product agencies to B2B SaaS in HVAC and agriculture.

- Designed Git Flow strategies and CI/CD pipelines for mobile app releases on 4+ products.
- Released and maintained Android and iOS apps to stores across all projects.
- Acted as tech lead, architecture owner, and client-facing point of contact for US stakeholders.
